

Biomass Equipment Ltd.

Is your business suffering from high heating costs?

## We can offer you a reduction of 25% on your heating bill where you incur no capital costs

R & S Biomass Equipment Ltd is the main importer and installer of Fröling biomass boilers for commercial and domestic customers. We provide the full solution from design, project management, and installation through to commissioning and after care. We can offer care homes who currently heat with oil or LPG gas substantial savings on their heating bill. This is achieved through the installation of biomass boilers. We can offer you a package through our energy supply company (ESCO) where no capital outlay is required. We cover the cost of the boiler installation and supply you with renewable heat at 25% less than the cost of oil or LPG gas. We are able to do this for a number of reasons:

- We have strong experience and partnerships in the wood fuel supply chain
- We have engineers "on the ground" meaning we can undertake routine maintenance and troubleshooting quickly and effectively allowing us to offer guaranteed availability
- We have the financial backing to allow us to offer fully financed options through ESCO solutions which can provide a no capital outlay option.

The benefits of the Heat Supply and ESCO model to customers are significant:

- Only pay for the heat that you use.
- Minimise risk; if the system does not perform then we will not be paid.
- Deliver CO<sub>2</sub> savings at no additional cost to you.
- Focus on your core business and leave the management, operation and risk associated with the biomass system to the professionals.
- Receive renewable heat at a reduction of 25% on your current fuel for a long term period.
